

Green Purchasing Policies of DL Chemical

DL Chemical encourages green purchasing based on its commitment to sustainable development of economy in harmony with the environment in alignment with the global trend to address climate change. In line with the cause of Daelim Industrial's green purchasing, the former form of DL Chemical, the Company shall explore the availability of green options prior to making purchases of products and services required for its business sites and shall consider purchasing such options first, provided that purchasing conditions including quality and price serve the purpose of said purchasing.

1. Definition of Green Products

'Green product' refers to an economic product with high quality, either government certified or produced on the Company's green initiatives, that is environmentally less harmful, in all aspects of product life cycle including production, consumption and termination, than other same-purposed products, or that requires less resources and energy and features minimal content of harmful substances.

2. Green Purchasing Guidelines

- The Company shall, prior to making a purchase of a product or service, explore the availability of green-certified options.
- The Company shall make endeavors to develop recyclable products or purchase such products.
- The Company shall, when making a purchase, focus on reducing usage of packaging material and avoid unnecessary packaging in order to minimize waste.
- The Company shall put constant efforts into bolstering the range of green options in pursuit of gradual expansion of green purchasing as the Company shall monitor the purchases of green products and keep them on record.
